

ABSTRACT OF THE DISCLOSURE

an opening-closing device includes a driving source,
an opening-closing mechanism for opening and closing an
opening-closing member provided at a vehicle body by
5 operation of the driving source, and a clutch positioned
between the driving source and the opening-closing
mechanism and sifting an energization state can transmit a
driving force of the driving source to the opening-closing
mechanism and a non-energization state can not transmit the
10 drive force. The clutch includes a drive portion and a
driven portion. The drive portion and the driven portion
contact each other by a first load which can transmit the
driving force from the driving source to the opening-
closing mechanism when the clutch is the energization
15 state. The drive portion and the driven portion contact
each other by a second load which can not transmits the
driving force from the driving source to opening-closing
mechanism when the clutch is the non-energization state.
